

# CONTAINER STORAGE SYSTEM AND METHOD

## ABSTRACT OF THE DISCLOSURE

5 A container system for storing food or other products is provided comprising a  
bottom wall and a peripheral wall defining a storage area for receiving the goods, and a  
display window extending from the outer surface of the peripheral wall. The display  
window defines a gap for receiving at least one display token. The display token  
corresponds to information relating to the goods or products stored in the container, and  
the display token is visible through the wall of the display window.
